

Ryan Parrish

Summary of Qualifications

I am a full-stack web developer with over a decade of experience. My focus is primarily interactive front-end development, specializing in **JavaScript, SCSS and semantic HTML**. I'm passionate about solving complex problems thru coding, design, art, user interaction, and innovation. My focus is to turn my client's goals into achievements and strengthen their purpose. Part of why I love development is the constant evolution of programming languages and the opportunity to always be learning new approaches, of refining old ones. I feel that my knowledge of this ecosystem and keeping adept in it's changing atmosphere is what give me the advantage when consulting w/ my clients on the lifecycle of development project. I have a broad range of utility and library experience that helps me be a more efficient developer and saves my clients in the end by hitting the ground running. Some of my tools use regularly are **Node.js, Apache, React, Vue.js, Angular.js, Express, Mongo, Git, GitHub/Bitbucket, PHP, MySQL, Rest API's, Wordpress** (theme and plugins), jQuery and many custom library, package and API endpoint integrations. When I'm not jamming code, I like to spend my time skiing, mtn. biking, rafting and exploring the world with my family.

Super self-driven with experience working remote and staying transparent w/ tools like Slack, Trello, Hangouts and video chat services.

Very familiar w/ GitHub pull request reviews, branching, merging and setting up various development builds and deployments.

Excited to use component based development w/ fast modern approaches utilizing sass or stylus, styled components, redux/flux, GraphQL and modern development JavaScript packages like React, Angular and Vue.

Technical Skills

Technologies/Tools: JavaScript, AngularJS, React, Vue.js, Node.js, PHP, Apache, CLI, jQuery, HTML5, CSS3, Three.js, Responsive Design, Mobile First, LESS, SASS, JSON, XML, AS2&3, IntelliJ, cURL, Coda, WordPress, Sublime Text, SVN, GIT, GitHub, Bitbucket, TFS, Visual Studio, Gulp, Grunt, Webpack, Yarn, Slack, Springloops, Jira, Java, Backbone, Maya, After Effects, Blender

- Responsible for the UI Development of highly interactive landing pages and promotional material.
- Emphasis on usability, SEO and cross browser support.

[Backcountry.com](#)

Angular, JavaScript, jQuery, CSS, Less

- Interactive A-level promo pages rich w/ animations, video integration and product details.
- Helped further develop a proprietary automaton system which integrates their company naming conventions and site promo placements to the PM's can automate the redundant task of entering various promos into their backend system.
- Utilized Angular.js, JavaScript, jQuery, CSS3 transitions & Less

Frontend Developer, Online Image

June 2012 – September 2013

[UI Developer, Longview Int'l Tech. Solutions Inc.](#)

PHP, CakePHP

- Worked primarily in CakePHP to develop tools for clients that help increase their SEO, provided resources for customizing content that's catered toward the users and gave complete analysis of site health and provided ways to increase their web visibility.

[Frontend Developer, U.S. Department of Defense](#)

HTML, CSS, JavaScript, jQuery, JSON

- Contractor for the U.S. Department of Defense developing the VA hospital's 'Health Management Platform'.
- This informatics initiative addresses the need to look across the VA's IT system and provide a platform which supports research, registries, business and clinical predictive modeling, and decision support for patients and providers.
- Built from the ground up, this home-brewed CRUD application utilizes HTML5, CSS3, and JavaScript to provide rich interactive JSON driven data visualization.

UI Developer/Contractor, MRM McCann

May 2012 – January 2013

JavaScript, Node.JS, HTML5, CSS, jQuery

- Responsible for the UI Development in various client sites with features including fully responsive design for cross mobile support, CSS animations, dynamically rich content driven thru multiple various CMS's and 3rd party API's.

AOL Project

Backbone.js, Bootstrap, jQuery

- Responsible for the UI Development of AOL's 'Gathr' e-commerce website.
- This fully cross mobile site delivers dynamic content, utilizing backbone.js, bootstraps, and jQuery.
- Helped develop the front end user experience, working w/ designers and backend engineers.
- Used multiple various CMS's and 3rd party API's to build a site that's shines on any platform and is scalable to meet the demands of the client.

VeriSign Project

HTML, CSS, JavaScript

- Played a key role in bringing the VeriSign annual Christmas email to life.
- Used HTML5, CSS3 & JavaScript.
- Responsible for animating this greeting card to open up and display the users custom message, a little faux snow and voila, VeriSign approved!

Verizon

CSS

- Worked on Verizon's 'industry solution platform', As a key player in developing this large site.
- Used the latest in CSS3 animations to provide seamless transition between pages and gave some striking appeal to the internal page's cards.
- Each card presented unique layouts and animations requirements, which often presented difficult logic and scenarios.
- Handled these one off differences with a fine comb and in the end the complete site was an interactive masterpiece.
